

# Exspat - Expat settlement facilitator

## Abstract

An app which makes the whole settling process for expats way easier and fun. The app helps the users to explore places around them, make new friends, learn local language, etc.

## Problem Statement

Moving to a new city is a major life event for anyone who is brave enough—and lucky enough—to take the leap. While being an expat is exciting, fun, and eventful, it can also be challenging. From making friends to figuring out where to buy groceries, the difficulties of living in a different region can feel insurmountable at times.

Settling in a new region poses many challenges, whatever your background, and there are some that are common experiences for migrants across the globe. The challenges faced by expats include their inability to cope up with the diversity of culture, language, social entitlements, social and political exclusion, housing , etc.

Thus, we arrive at our project, which aims to address some of the most common problems faced by expats residing in different regions. **Exspat** is a social media application that connects locals and expats alike via a shared platform to discuss various issues faced by them. They can share their stories, some of the problems they face and even offer advice to one another through this platform. It is an immigrant settlement facilitator that helps people who are new to a city to finally settle down and feel right at home. Many of the expats can even offer solutions to others themselves as they utilize the application and gain more experience overall.
